## **Texas Precision Plating Announces Major Capital Investment to Secure ISO 9001, AS9100, and Nadcap Certifications**

**GARLAND, TX – May 1, 2026** – Texas Precision Plating, under new ownership and visionary leadership, today announced a comprehensive operational overhaul aimed at securing ISO 9001:2015, AS9100, and Nadcap certifications. This move marks the centerpiece of a revitalization campaign designed to establish the facility as a premier finishing partner for the aerospace and defense industries.

Following the acquisition, the new leadership team has launched a comprehensive quality transformation, replacing legacy processes with a modern infrastructure. This involves substantial capital expenditure on advanced machinery and laboratory systems, alongside the recruitment of industry-leading personnel, to ensure full alignment with ISO 9001, AS9100, and Nadcap standards.

“When we took over Texas Precision Plating, our mission was clear: return this facility to a position of uncompromising excellence,” said Matt Amin, CEO. “We aren't just fixing what was broken; we are building a new culture of precision. Achieving these certifications is the definitive benchmark of that transformation, proving to our partners that our new era is defined by total process control and transparency.”

### **A Culture of Excellence**

The path to certification is already yielding results. Multiple industry manufacturing leaders have issued provisional approvals, indicating that the facility's core production lines—including Passivation, Sulfuric Anodizing, and Nickel, Gold and Silver Plating—are now operating at or above AS9100 standards.

This “bottom-up” approach ensures that quality is baked into the workflow rather than just managed from the top. The investment includes:

- Infrastructure Upgrades: Modernization of plating lines and waste treatment systems.

- Advanced Laboratory Testing: New protocols for chemistry analysis and thickness verification.
- Workforce Development: Intensive training for all staff on risk-based thinking and aerospace-grade documentation.

## **The Road to Full Certification**

Texas Precision Plating is executing a disciplined certification roadmap in coordination with third-party auditors to finalize the process. With the infrastructure and leadership now in place, the company anticipates the formal award of ISO 9001 and AS9100 status by the end of Q2 2026, followed by Nadcap accreditation by the end of Q4 2026.

“This is a new Texas Precision Plating,” added Dwayne Elliott, General Manager. “The investment we are making today is a direct reflection of our commitment to the long-term success of our customers in the most demanding industries on earth.”

## **About Texas Precision Plating**

Located in Garland, Texas, Texas Precision Plating provides high-specification metal finishing for the telecommunications, aerospace, medical, automotive, and defense sectors. Under new ownership since early 2026, the company is dedicated to blending technical expertise with modern quality management systems.
