

FOR IMMEDIATE RELEASE

Texas Precision Plating Secures AS9100 and ISO 9001:2015 Certifications to Elevate Aerospace and Defense Capabilities

GARLAND, TX – June 17, 2026 – Texas Precision Plating, a leader in high-specification metal finishing, has officially achieved AS9100 and ISO 9001:2015 certifications. This milestone marks a pivotal advancement in the company's comprehensive operational overhaul under its new leadership, establishing an uncompromising standard of quality for the aerospace, defense, and high-reliability sectors.

The successful earning of these globally recognized designations follows a disciplined strategy centered on three core pillars: Infrastructure, Technology, and People. Moving forward, Texas Precision Plating will continue to deliver its specialized finishing expertise with the added assurance of formalized, world-class process control.

"These certifications aren't just badges on our wall; they are a promise of total process control and transparency for our partners," said Matt Amin, CEO. "We aren't just fixing what was broken; we are building a new culture of precision that ensures quality is integrated into every component we finish."

A New Benchmark for Quality and Compliance

Following the facility's acquisition by Continental Systems, LLC, the new leadership team has executed a comprehensive quality transformation. By replacing legacy processes with modern infrastructure, Texas Precision Plating ensures that partners in regulated sectors receive the closed-loop excellence and technical precision required for mission-critical applications.

This "bottom-up" cultural shift aligns with Continental Systems' overarching mission to provide an integrated manufacturing platform where finishing, fabrication, and machining work seamlessly together to eliminate supply chain bottlenecks.

"The investment we are making today is a direct reflection of our commitment to the long-term success of our customers in the most demanding industries on earth," said Dwayne Elliott, General Manager. "We invite our long-standing partners and new customers alike to witness this new chapter of Texas Precision Plating."

Upgraded Operational Capabilities

Through this comprehensive operational overhaul, Texas Precision Plating has fully modernized its workflows to optimize production and ensure aerospace-grade quality, featuring:

- **Modernized Facilities:** Upgraded plating lines and state-of-the-art waste treatment systems are now fully operational.
- **Advanced Laboratory Testing:** Implementation of advanced laboratory technology ensures precision chemistry analysis and thickness verification.
- **Workforce Development:** Intensive, ongoing training programs ensure risk-based thinking and aerospace-grade documentation are standard practice at every level.
- **Certified Core Processes:** Full compliance and certification apply directly across key production lines, including Passivation, Sulfuric Anodizing, and Nickel, Gold, and Silver Plating.

The Strategic Roadmap: Eyes on Nadcap

While today's announcement celebrates the formal award of AS9100 and ISO 9001:2015 status, the company remains steadfast on its disciplined operational roadmap. Texas Precision Plating is now actively accelerating its efforts toward full Nadcap accreditation, which is scheduled to conclude by the end of Q4 2026.

This next step will further solidify the facility's capability as a premier Tier-1 supplier for the world's most demanding industries, including the aerospace, defense, telecommunications, and medical sectors.

About Texas Precision Plating

Located in Garland, Texas, Texas Precision Plating provides high-specification metal finishing for the telecommunications, aerospace, medical, automotive, and defense sectors. Under new ownership since early 2026, the company is dedicated to blending technical expertise with modern quality management systems.
